Intellihot's Tankless Water Heater Technology Saves Chicago's 2nd Largest Residential Building 27 Percent on Energy Costs

Galesburg, Ill. - [Intellihot](#) Green Technologies, the inventors and manufacturers of the first on-demand tankless water heaters for large-scale commercial applications, today announced that [340 on the Park](#), the second tallest residential building in Chicago, has saved over 27 percent on its energy expenditure after installing Intellihot tankless water heaters in March 2015.

With four [iQ1001](#) Intellihot water heaters installed, the 68-floor, 344-unit property eliminated 2,000 gallons of storage space, all the while continuing to provide the same level of comfort to its residents.

"We have been very pleased with the installation and performance of the system and are proud to be at the forefront of demonstrating an energy-efficiency breakthrough in the building community," said Amy Eickhoff, building manager for 340 on the Park. "Any building that has a domestic hot water boiler capital project in the future should be considering Intellihot."

Unlike what is typically lost in traditional storage-based water heating methods, Intellihot's innovative water heaters save clients an average of 20 to 40 percent on their energy usage per year. The company's suite of 13 water heaters does not require storage tanks and only heats water on-demand, making them an efficient and sustainable choice for large-scale commercial properties.

"By installing our heaters, our clients are experiencing that less is more," said Sri Deivasigamani, CEO of Intellihot. "340's previous water heating system consisted of two enormous commercial tank-type heaters, contributing to 2,000 gallons worth of storage and had a capacity of 2 million British Thermal Units (BTUs) per hour. The heaters we deployed are cascaded together, have zero gallons of storage and are able to provide up to 4 million BTUs per hour, thus becoming a more logical source of energy and heating for the facility."

About Intellihot Green Technologies Inc.

Intellihot was founded in 2005 in Galesburg, Illinois and is the first company to design and build tankless water heaters entirely in the U.S. for commercial buildings. The company's mission is to create products that solve human energy needs with lower environmental impact. The company is the first to provide endless hot water only when needed, eliminating waste and environmental impact, and cutting down greenhouse emissions by 37 percent. With customers like Levi's® Stadium, home of the San Francisco 49ers, 340 on the Park, Chicago's second tallest residential building, Costco and Hilton Hotels, Intellihot is working towards a waste-free future in homes, businesses, stadiums and facilities across the planet.
